Overview

The NFC GalaRing G1 - L enables touch-based business card exchange and identification without software installation or charging. It features a waterproof, dustproof design with high-quality leather and stainless steel, compatible with NFC-enabled Android phones.

Key Features

The brand-new card information exchange method
You don't need to print piles of business cards, nor sort lots of cards received any longer. Also, you don't have to be embarrassed when forgetting to bring business cards. GalaRing brings a more initiate and brand-new exchange method – touch. Without installing any software on the phone, your friends can sense your "touch" and receive business cards and other information you transmit. Is there any other more simple and interesting method?

Identification technology comparing to fingerprint
How many times do you repeat the same action every day- holding you beloved mobile phone and skillfully entering various passwords to unlock?

Today, we embed the identification, you can unlock programs, check privacy images, and quickly recall commonly used passwords to copy and enters. Everything is so natural and perfect.

Applicable Phone Models
Ps. currently, our smart ring can only support NFC-enabled Android phones, including but not limited to all models listed above.
