INDUSTRIAL PRODUCT DATASHEET

reComputer Industrial RK3576 | 4GB RAM, 32GB eMMC | Rockchip Open Industrial Edge AI Box

reComputer Industrial RK3576 (4GB RAM, 32GB eMMC) is a fanless Rockchip industrial edge AI box with octa-core processing, wide-voltage input, and support for vision, LLM, VLM, STT, and TTS workloads in industrial vision, data...

Overview

The reComputer Industrial RK3576 is a fanless Rockchip-based industrial edge AI box featuring an octa-core CPU (4× Cortex-A72 @ 2.2GHz + 4× Cortex-A53 @ 2.0GHz), ARM Mali-G52 MC3 GPU, optional 4GB/8GB LPDDR5 memory, 32GB/64GB eMMC storage, compact metal enclosure, and 9–36V DC wide-voltage input. It supports on-device AI workloads including YOLO11 vision at 77.9 FPS, DeepSeek-R1-Distill-Qwen 7B LLM, Qwen2.5-VL 3B VLM, and real-time Whisper STT and MMS TTS for industrial vision inspection, data acquisition/gateway, and equipment & energy monitoring applications.

Key Features

01 **Advanced Processing Subsystem**

Octa-core CPU architecture featuring 4× Cortex-A72 @ 2.2GHz + 4× Cortex-A53 @ 2.0GHz, paired with an ARM Mali-G52 MC3 GPU to handle demanding multi-threaded industrial control and automation tasks.

02 **Flexible Hardware Configurations (Optional)**

Available in multiple memory and storage combinations to perfectly align with your specific edge workload requirements:

03 **Memory**

4GB / 8GB LPDDR5 (Scalable up to 16GB).

04 **Storage**

32GB / 64GB eMMC(Scalable up to 128GB).

05 **Vision CNN**

YOLO11@77.9FPS(640*640)

06 **LLM**

capable for deepseek-r1-distill-qwen 7b support

07 **VLM**

capable for qwen2.5-vl 3b

08 **STT**

whisper_base_20s (RTF 0.218) with real-time processing support

09 **TTS：mms_tts_eng_200 （RTF 0.069) with real-time processing support**

10 **Fanless Passive Cooling**

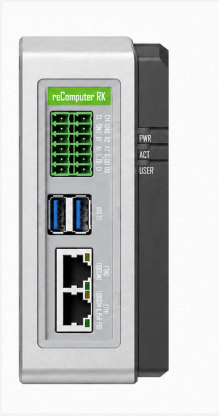

11 **Compact Metal Enclosure**

12 **9–36V DC Wide-Voltage Input**

Product Gallery

Applications

- **Industrial Vision Inspection:** Run local AI vision workloads for object detection, classification and automated inspection.
- **Industrial Data Acquisition & Gateway:** Connect field devices through RS485, CAN FD and digital I/O, process data locally and forward it to upper-level systems.
- **Equipment & Energy Monitoring:** Monitor machine status, meter data and operating conditions with local data processing and logging.
