INDUSTRIAL PRODUCT DATASHEET

NVIDIA® Jetson Nano™ Active Heat Sink

The Jetson Nano Module Active Heat Sink provides essential and strong physical cooling for the Jetson Nano's high-intensity workloads, using a 7 blades fan mechanism for active air cooling.

Overview

The Jetson Nano Module Active Heat Sink provides essential and strong physical cooling for the Jetson Nano's high-intensity workloads, using a 7 blades fan mechanism for active air cooling. It allows for customizing fan speed through PWM, which helps to avoid overheating and throttling issues. It can be customized to air flow speed through PWM function.

Key Features

01 **Fully compatible with NVIDIA Jetson Nano Module.**

02 **Essential for high-intensity work**

Featuring a full aluminum alloy heatsink and a 7-blade fan mechanism, this design provides efficient physical cooling that helps to prevent overheating and CPU throttling.

03 **Convertible Interface**

Support both Graphics Card 4-pin connector and Mainboard Standard 4-pin connector

04 **Customized Air Speed**

Utilize PWM to control the fan speed

05 **Easy to install**

Mounting Holes & bolts Included
