Raspberry Pi Compute Module 5 - 16GB RAM, 32GB eMMC (CM5016032)

This version of the Raspberry Pi Compute Module 5 includes a quad-core Arm Cortex-A76 processor, 16GB LPDDR4 RAM, 32GB eMMC, dual 4Kp60 HDMI output, hardware video decode at up to 4Kp60, Gigabit Ethernet, USB 3.0, dual...

Overview

This version of the Raspberry Pi Compute Module 5 includes a quad-core Arm Cortex-A76 processor, 16GB LPDDR4 RAM, 32GB eMMC, dual 4Kp60 HDMI output, hardware video decode at up to 4Kp60, Gigabit Ethernet, USB 3.0, dual camera interfaces, and PCIe Gen 2 x1 interface.

Key Features

01 **New processor**

Upgraded from CM4 CPU model BCCM2711, quad-core Arm Cortex-A72, 1.5GHz to CM5 CPU model BCCM2712, quad-core Arm Cortex-A76, 2.4GHz.

02 **New manufacturing process**

Enhanced from CM4's 28nm to CM5's 16nm

03 **Higher memory speed**

Improved from CM4 LPDDR4-3200 to CM5 LPDDR4-4267

04 **More memory options**

Includes versions with 16GB SDRAM and 64GB eMMC flash memory

05 **More powerful video output**

CM5 supports dual 4K60P output and HDR

06 **Stronger power supply**

CM5's power interface has been upgraded from 5V3A to 5V5A, supporting the PD protocol

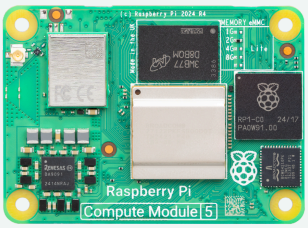

07 **Extensive I/O interfaces**

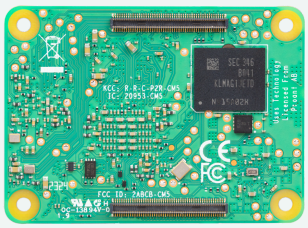

Including PCIe 2.0, USB 3.0, MIPI DSI/CSI-2, and up to 30 GPIOs supporting various protocols (UART, I2C, SPI, etc.).

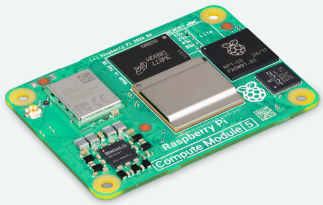

08 **GPU upgraded from CM4's 600MHz VideoCore VI to CM5's 800MHz VideoCore VII**

09 **CM5 supports 4Kp60 HEVC decoder and OpenGL ES 3.1, Vulkan 1.2.**
