Overview

This RGB LED strip is based on WS2812 LEDs. It is packed with 30 LEDs and has a length of 5 meters. You can easily control the behavior of these LEDs either by using the included remote controller or using your mobile phone via a Bluetooth connection. The remote controller can be used for many functions such as selecting static colors, flashing LEDs in different modes, adjusting brightness, and more. But however, by using an APP on the mobile phone, you can have even more functionality.

Key Features

01 Different static colors and flashing modes available

02 Adjustable brightness and flashing speed with timer and music activated functions

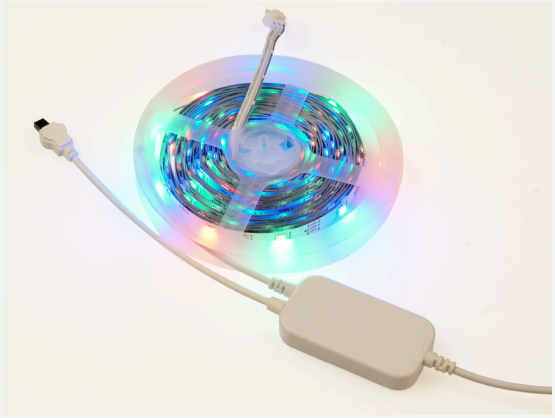

03 Easily control the lights using the provided remote control or using mobile phones with a Bluetooth connection

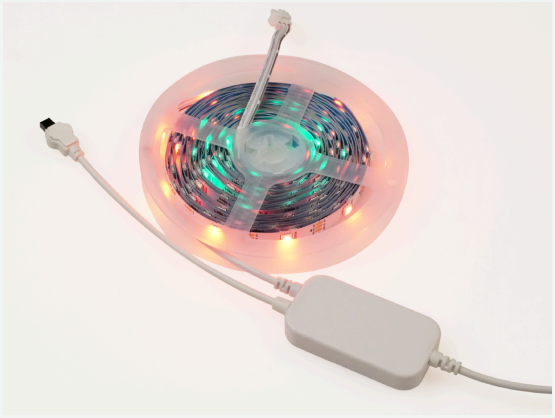

04 Conveniently install the LED strip with the adhesive tape and use for a wide range of applications

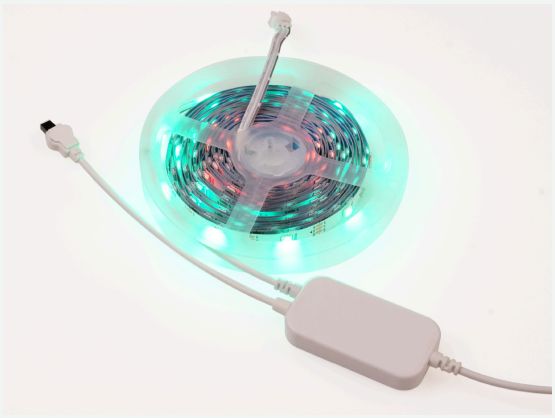

05 Can be easily cut to adjust according to the required length

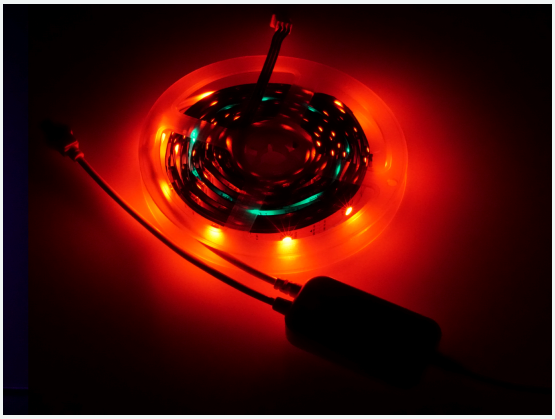

06 Connect to an exciting wall charger/ mobile phone charger to light up the strip (5V/2A)
