Overview

The 1.02 inch E-paper Display is a flexible substrate-based display with a 128x80 pixel active area and 1-bit white/black full display capabilities. It features high contrast, ultra-low power consumption, and pure reflective mode.

Key Features

01 **Exceptional Readability**

The display's reflective properties ensure effortless legibility of text and images in different lighting environments.

02 **Ultra-Low Power Usage**

The E-paper only consumes power during updates, leading to prolonged battery life and efficient energy use.

03 **Wide Viewing Angles**

Greater than 170 degrees, unaffected by light direction.

04 **Flexibility and Portability**

Allowing bending and curling for versatile applications.

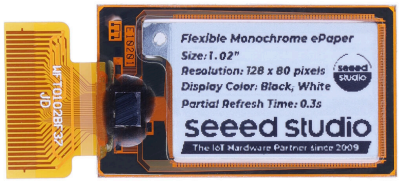

05 **Eye-Friendly and Heat-free**

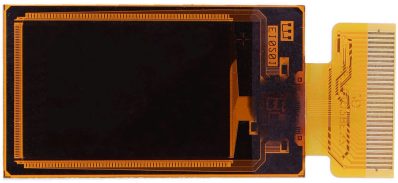

Eliminate glare, providing a comfortable viewing experience while remaining cool without generating heat.

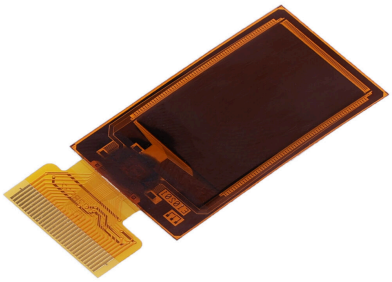

06 **What is an E-Paper?**

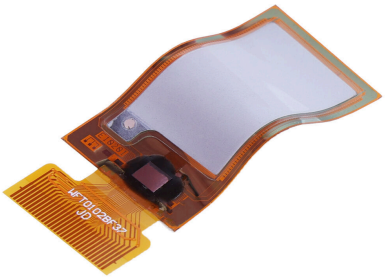

07 **Advantages Over Traditional Displays**
