Overview

DT71 Mini Digital Tweezers is a tool for multi-function measurements with full differential input measurement. DT71 has a unique trinary structure, which can be separated into the controller, testing arms, and tweezer tips, flexible to be replaced and combined.

Key Features

01 **Innovative trinary structure**

separated into the controller, testing arms, and tweezer tips, which are flexible to be replaced and combined.

02 **360° rotatable controller with OLED screen, with good viewing angles**

03 **Smart gesture recognition with automatic identification of left/right-hand operation and adjusting the screen orientation accordingly**

04 **Hidden touch button on top of the controller, which makes it easy to operate with only a light touch**

05 **Test arms use magnetic elasticity to provide an easy clipping, ergonomic, and long-lasting structure**

06 **Built-in dual lithium batteries in test arms, balancing both arms and providing a longer standby time**

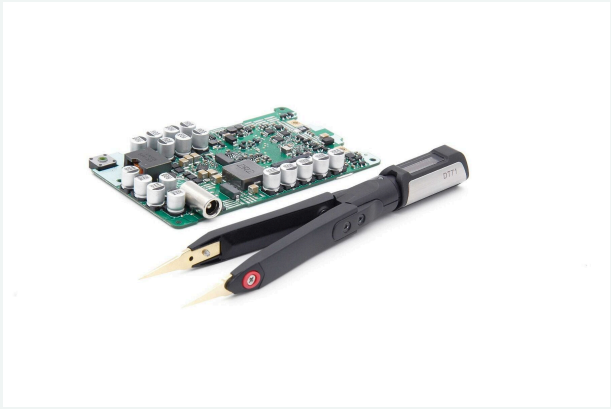

07 **Several kinds of gold-plated interchangeable tweezer tips, enabling higher measurement accuracy in various usages**

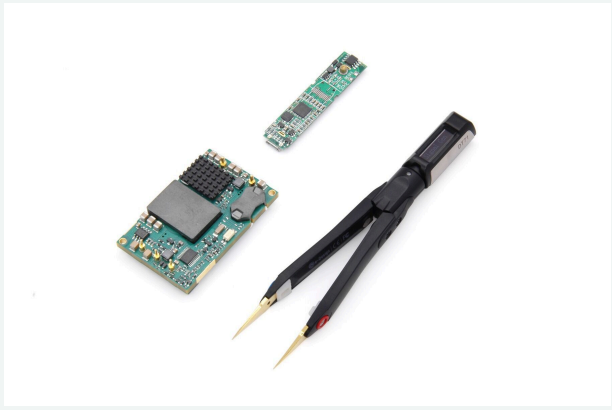

08 **Automatically identify SMDs including resistor, capacitor, inductor, and diode, showing both main and secondary parameters**

09 **A built-in signal generator can output a variety of waveform signals**
