Overview

Home Assistant Connect ZWA-2 is a central Z-Wave controller engineered with a high-performance, oversized antenna for unparalleled range and rock-solid network stability on the dedicated Z-Wave frequency. It supports traditional Z-Wave mesh and Z-Wave Long Range, with automatic region configuration, and enables integration, automation, and management of Z-Wave end devices through the Home Assistant platform.

Key Features

01 **Unparalleled Range and Coverage**

Engineered with a high-performance, oversized antenna, the ZWA-2 pushes signal through thick walls and across long distances, eliminating dead spots where other controllers fail.

02 **Rock-Solid Network Stability**

By operating on the dedicated Z-Wave® frequency, the ZWA-2 avoids the congested 2.4GHz band, shielding your smart home from Wi-Fi and Bluetooth interference for flawless, reliable communication.

03 **Future-Proof and Globally Compatible**

Ready for any setup, the ZWA-2 supports both traditional Z-Wave® mesh and the groundbreaking Z-Wave® Long Range protocol. With automatic region configuration when used with the Z-Wave® JS add-on, it's the single, definitive controller for users anywhere in the world.

04 **Optimized for Efficiency**

The ZWA-2's superior sensitivity means your battery-powered devices don't have to shout. They communicate less often and at lower power, dramatically improving their battery life and contributing to overall network health.

05 **Intelligent Orientation Sensing**

A built-in tilt sensor ensures you've installed the device in the optimal vertical position for peak performance, indicated by a blinking yellow LED. For custom installations, this indicator can be easily disabled within Home Assistant.

06 **Customizable Status LED**

Tailor the device to your space. The active status LED's color can be fully customized or turned off completely through the Home Assistant interface.

Applications

- **Central Z-Wave Controller:** To serve as the central Z-Wave® controller within a Home Assistant smart home system.
- **Device Integration and Automation:** Enable the integration, automation, and management of a wide array of Z-Wave® end devices (e.g., sensors, lights, switches, locks, thermostats) through the Home Assistant platform.
