Overview

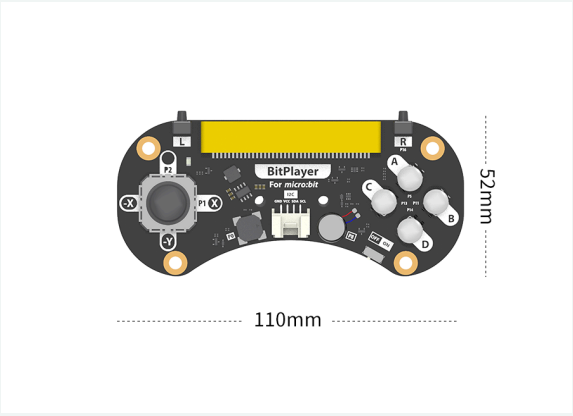

BitPlayer plus micro:bit, you just made a cool wireless remote controller and a game console for yourself. For an authentic gaming experience, the product uses a 2-axis joystick that just feel like any joystick on a popular Gameboy or PSP. There are 6 programmable push-buttons, the top left, top right, and button A,B,C,D. With the built-in vibration motor and buzzer, you can create an immersive and interactive gaming experience. Some people may feel that the 5x5 led matrix does not satisfy their gaming needs, so we have the I2C Grove port on board for Grove peripherals like an OLED Display.
