Overview

The SenseCAP LoRaWAN Starter kit is designed specifically for beginners. It includes the necessary parts for LoRaWAN. With this kit, you can learn and experience with the entire architecture of LoRaWAN. You can also utilize the grove sensors provided in the kit or choose your own sensor modules to build your own LoRaWAN projects.

Key Features

01 **Deploy in 10 Minutes**

Build a LoRaWAN project through 4 steps in 10 minutes and can visualize data on the Cloud platform

02 **Wide Application and Compatible with Worldwide LoRaWAN® Networks**

Compatible with different types of LoRaWAN® network servers making it suitable for a wide range of applications and industries

03 **Expand the ability of XIAO Series Dev Board**

Compatible XIAO ESP32S3 board offers various data transmitting interfaces and functional peripherals, compatible with Arduino

04 **Simplified by Grove-Wio-E5**

With built-in AT command firmware, the board simplifies application development for developers, offering a seamless and flexible experience

05 **Great Extensibility**

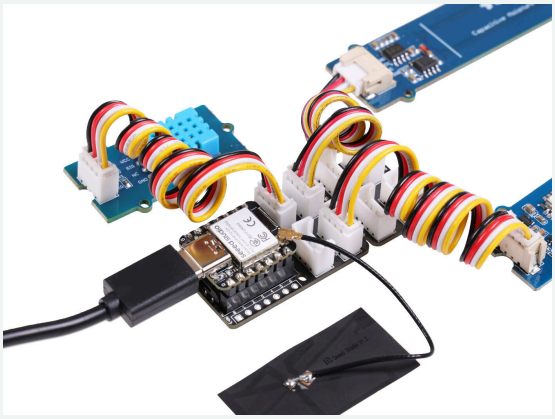

By updating the firmware through UF2, easily make it compatible with other Grove sensors

06 **No-code experience： Plug and Play in just four steps, no programming background is required**

Product Gallery

Applications

- **The kit includes SenseCAP M2 Multi-Platform LoRaWAN Gatewaywhich is a standard LoRaWAN® gateway that supports connecting to different network servers. It can be used not only for personal LoRa development but also in conjunction with industrial sensors.**
