Overview

[image] Loko is an advanced, ultra-compact offline GPS tracking system utilizing LoRa (Long Range) radio technology for extended-range communication without cellular infrastructure dependency. This dual-unit system comprises a compact transmitter (30 x 22 mm, 14g) and a receiver, offering precise geolocation services with a 15+ km operational radius. This product is a co-create collaboration with Seeed Studioandnolilab

Key Features

01 **No cellular signal or internet required**

02 **Accurate Metrics**

Get detailed latitude, longitude, altitude, and speed information.

03 **Real-Time Tracking**

View precise GPS locations instantly.

04 **Offline smartphone app iOS/ Android**

05 **No monthly fees**

06 **15+ km range (tested in open area)**

07 **Up to a year battery life in a single charge (Air unit)**

08 **Tracks up to 30 Air units per Ground unit (Multi Connection)**

09 **Open-source with developer-friendly features**

10 **LoRaWAN and LoRa P2P communication**

11 **Data logging and history recording capability**

12 **Offline Maps**

Navigate with pre-downloaded OpenStreetMap areas—no internet required.
